

EMPOWERING SAFE EXCAVATIONS AND UTILITY MANAGEMENT

UMAPP revolutionises the ground penetration permit (GPP) process by offering a digitised system that transforms how you visualise, manage, and interact with underground assets.

Seamlessly integrating a secure workflow with GIS utility data, UMAPP allows you to visualise all permits and utilities to identify potential hazards, mitigate risks, and ensure compliance.

With an auditable data management process, UMAPP provides insight into the issuance and approval of permits, along with utility details available at the time of approval.

Efficiency

Streamlining the permitting process, reducing delays and increasing site management.

Accuracy

Integrated GIS utility data ensures accurate information, minimising the potential for utility strikes and costly accidents.

Safety

Protecting the team, the public, and critical infrastructure from harm.
